BRILLIANT COLOR. TWO COATS. NO COMPROMISE.

WHERE OUR OBSESSIONS FOR COLOR AND INNOVATION COLLIDE

Over 50 years ago, we set out to formulate a coating as innovative as it was inspired. Our team combined applied science and decades of weathering data to develop Fluropon Continuum — a revolutionary two-coat, 70% PVDF metal coating for coil and extrusion applications. Formulated with the optimal combination of raw materials, Fluropon Continuum eliminates the need for a clearcoat and opens you up to nearly limitless color options.

INNOVATION YOU EXPECT FROM US

Fluropon Continuum is a 70% PVDF metal coating system for curtain walls, metal wall panels and other coil and extrusion products. The game-changing difference? Unlike traditional metallic systems, Fluropon Continuum requires just two coats. Its mica-based formula eliminates the need for a clearcoat by delivering weathering performance and sparkle equal to traditional three-coat systems.

PERFORMANCE GUARANTEED FOR DECADES

To develop a superior-performing two-coat system, scientists tapped into thousands of real-world weathering data points from our state-of-the-art testing facility in South Florida. For decades, thousands of two-coat panels have been subjected to the most extreme weather conditions of UV exposure, heat and humidity. The results show a weathering performance that outlasts traditional coatings. We are standing behind the performance of this product by offering an additional 5 years of warranty for color fade and chalk. Fluropon Continuum will carry a 25-year warranty for extrusion applications and a 35-year warranty for coil applications. For additional warranty details, work directly with your end product manufacturer.

YOUR VISION, FULLY REALIZED

Not only does our two-coat system provide superior performance — it helps you realize your inspiration in a way that traditional coatings can't. Fluropon Continuum is available in nearly any color you can dream up and can be customized depending on the level of sparkle desired. This freedom allows you to think beyond traditional silvers, golds and champagnes and explore new color spaces like bright, vibrant reds, greens and blues.
